Products

Sealant

Inland Marine USA Sealant is specially formulated to cure porosity leaks and small pinhole leaks found in all inflatable boats causing them to “go soft.” Sealant forms a bond with the interior fabric of the inflatable, stopping or “sealing” slow leaks and helping to prevent future leaks from developing.

Three easy steps to treat an inflatable:

1. Deflate the air chamber.
2. Pour in Sealant through the air valve.
3. Re-inflate the air chamber.

Sealant is a light liquid that will go airborne and plug leaks as the air is trying to creep out. In one easy process, leaks are cured from the inside that are virtually impossible to find from the outside.

Inland Marine USA Sealant is the only product of its kind that allows for future deflation of the inflatable (for storage, etc.) without the skin sticking to itself making re-inflation virtually impossible. This is why manufacturers like Zodiac, professional boat repair shops worldwide, the US Army, Navy, Coast Guard and marine distributors purchase and use Inland Marine USA Sealant.

Patch Kit

Repair nylon/hypalon/neoprene with this tough bonding formula. Kit includes either hypalon or urethane/PVC adhesive and a 6” x 12” either hypalon or PVC fabric to ensure long-lasting repairs on inflatable boats.

Topside Paint

Because inflatable boats expand in the hot sun and contract at night in cooler temperatures, Inland Marine Topside Paint® specially formulated to have the elasticity and UV resistance required for use with inflatable boats.

Topside Paint is a latex based paint. Application is the same as any latex/water based paint. The only difference is that Topside Paint remains flexible after it dries.
